Education

BACHELOR OF SCIENCE IN SOFTWARE ENGINEERING PAK-AUSTRIA

10/2022 - PRESENT

FACHHOCHSCHULE INSTITUTE OF APPLIED SCIENCES AND TECHNOLOGY

Relevant Coursework: Programming Fundamentals, Object Oriented Programming, Data Structures, Database Systems, Operating Systems, Software Requirement Engineering, Software Design and Architecture, Web Engineering, Software Construction Development, Information Security, Computer Networks, Mobile Application Development

Experience

ORCA CLAN TECH (07/2023 - 10/2023, ABBOTTABAD)

I have created projects including a **food delivery website**, an **online car showroom** called Car Vista, a weather website that displays real-time data, and a QR code generator for creating custom QR codes.

PROSENSIA (11/2023 - 07/2024)

Developed an AI-based solution for Prosensia, focused on predictive maintenance of air conditioners. I created a web panel to display real-time device data and allow remote control of the devices. The official websites for the startup are **prosensia.pk**

INOSTRIK (11/2024 – PRESENT, ISLAMABAD)

Developed multiple client projects handling both frontend and backend using **React.js** and **Next.js**, integrating modern backend services such as **Supabase** and **Appwrite**. Focused on building scalable, responsive, and user friendly web applications with clean and maintainable code.

Skills

HTML5, CSS3, JavaScript, Vue.js, Node.js, Express.js, SQL · Tailwind CSS, React.js , Mongo DB, Github/Git, PostgreSQL, Appwrite, PHP, Supabase, Next js, Nuxt js, React native using Expo, Github Actions

Projects

Timetabl

Developed a student timetable mobile application, published on the **Google Play Store**, initially launched as a **PWA using Vue.js** and later migrated to **React Native** to improve performance and accessibility. The application provides real-time access to class schedules and sends **push notifications** to students **10 minutes** before each class. It is currently used by over **750 university students**, significantly improving schedule visibility and engagement. [Checkout](#)

Bonny

Developed and maintained the **backend system** for a location-based restaurant discount platform, including **interactive map integration** to display nearby restaurants. Implemented **Stripe payment processing** for coupon purchases with secure transaction handling. Designed **QR code generation and validation logic**, ensuring **single-use coupons** and preventing reuse or fraud through server-side verification. Built APIs to manage restaurants, coupons, payments, and real-time redemption workflows. [Checkout](#)

Plyzrx

Developed the **backend for Plyzrx**, a UNO tournament gaming platform built with **Next.js**, including APIs for admin-managed tournaments, user participation, match creation, and reward distribution. Also built the platform's **landing page and admin panel**. [Checkout](#)

Spelling Bee:

Built a real-time **Spelling Bee multiplayer application** using **Appwrite as the backend and database**, featuring three difficulty levels. The app allows users to create game rooms, share unique room codes, and join other players to compete in real time using **Socket.io** for live synchronization. [Checkout](#)
